

How to Use Electronic Games in Power Point Format

- Open the game file as you would a normal power point presentation.
- Select 'View Slide Show' from beginning
- Press 'Enter' or 'Advance Slide' to bring up the title and advance to the next slide (grid with categories and dollar amounts)
- To play the game, select and click on the desired dollar amount in the grid slide. The corresponding question should appear. The contestant answers the question and when 'enter' is clicked twice, the answer appears on the slide. Review the answer with the group and then click on the house icon that appears in the lower left corner of the screen. Clicking this icon brings the user back to the grid slide where another dollar amount is clicked to move to the next question.

In Power Point format, it is possible for a user to edit questions and answers. The user must be aware not to delete or move any slides from the slide deck as this will break the internal links and the presentation will no longer work as described above.

How to Use Electronic Games in PDF Format

The electronic games for IC Week have been converted to pdf format so that anyone who does not have Microsoft PowerPoint on their computer can still use the games.

- Open the file by clicking on it.
- Under 'View', click 'Full Screen Mode' which should make the slides as big as your screen.
- Click the left mouse button to move from one slide to the next.
- When you arrive to the grid slide, select and click on the desired dollar amount. The corresponding question will come up in a new slide. *Please note, keep track of the dollar amounts that have been selected as their colour will not change after they've been viewed.
- The contestant answers the question and when 'enter' or the mouse is clicked, the answer appears on the slide. Review the answer with the group and then click on the house icon that appears in the lower left corner of the screen. Clicking this icon brings the user back to the grid slide where another dollar amount is clicked to move to the next question.

In pdf format, the user is not able to modify the information on the slides.
